

SYSTEM AND METHOD FOR ANALYSIS AND FEEDBACK OF STUDENT PERFORMANCE

Abstract of the Disclosure

Embodiments of systems and methods are disclosed that analyze student performance and provide feedback regarding the student performance, for example, to an instructor, other school official, parent or directly to the student. In certain embodiments, the methods and systems communicate in real time with the educational program, for example, math or science games, lessons, quizzes or tests, to provide contemporaneous feedback or recommendations to the instructor regarding student performance. In addition, embodiments of the systems and methods evaluate and provide feedback of the effectiveness of the educational program itself, and track progress at different levels, for example, a student, class, school or district level, over a multitude of different durations and time periods. Still further, embodiments of the systems and methods perform comprehensive data analysis and statistical computations.
